CURRICULUM FOR BS RESPIRATORY THERAPY AND INTENSIVE CARE TECHNOLOGY

KHYBERMEDICALUNIVERSITYPESHAWAR

AIMSANDOBJECTIVESOFTHECOURSE:

AIMS:

The aim of the 4 years degreeprogramme in Intensive CareTechnology is to equip the students with relevant professional knowledge, skills, techniques and ethical values to enable them to apply their acquired expertise at the level between the doctors and the patient for efficient health service delivery.

GENERALLEARNINGOBJECTIVES:

Intensive Care Technology education and training should enable the student to:
--

- Express theknowledge, technical, non-technical skillsin a standardized and reproducible environment.
- Develop the decision power and exercise appropriate judgment skills with matching application.
- Develop administrative skills in developing crisis management plan.
- Develop effective communicationskills to perform in working environment effectively.
- © Create the expertise in legal implication of emergency cases and application of professional attitude.

SPECIFICLEARNINGOUTCOMES

Following competencies will be expected from a student completing 4 years degree course in Respiratory therapy And intensive care Technology. The student should be able to:

- Demonstrate knowledge of human structure, function, and disease process.
- Develop theknowledge, skills and attitudes necessary to perform safelyand accuratelyall

Basic and advanced life support procedures in emergency /critical care, trauma and

Disaster management etc

- Acquire common sense, attention detail, prioritizing skills and anticipation of potential problems in the care of the acutely ill or injured patient
- Deliverefficient and competent care to critically illinfants and children.

- Gain experience in the analysis of data and management of acutemedical and surgical crisis

 Of the patients
- Understandthe total patient care in intensive care, including the awareness of support services available andwhen to activate them.
- Gain experience in the ethical principles and practical management of end-of-life care
- Access appropriate consultations wherever required.
- Maintainasepsisinallsuchcasesrequiringaninjectionorhavingacontagious disease or operative procedures
- Establish rapport with the patient and related people to decreasetheirstate ofcrisis
- Directandcoordinatethetransportofthepatientbyselectingthebestavailablemethod(s)inconjunction with medical commandauthority/protocol.
- Clearlyandconciselydelivereducationalinformationtostaffinbothformalandinformalteaching settings.
- Do researches on Intensive Care technology
- Be exposed to and gain understanding of administrative issues in critical care services.

FRAMEWORK FOR BS INTENSIVE CARE TECHNOLOGY 4 years BS Program | Total numbers of Credit hours | 132(HEC recommended: 124-136) | | Duration | 4 years | | Semester duration | 16-18 weeks | | Semesters | 8 | | Course Load per Semester | 15-18 Credit hours | | Number of courses per semester | 4-7

PMS-601

MEDICAL BIOCHEMISTRY-I

CreditHours:4(3+1)

Course

objective:

After successful completion of this course, students will be able to,

- Describe the chemical composition, biochemical role, digestion and absorption of macro and micro molecules of the cell.
- Discuss different biochemical reactions in cell
- Explain mechanism of action of hormones.

Coursecontent

S:

Acids,bases,pHandbuffers,Biochemicalcompositionandfunctionsofthecellmembrane,Transport acrossthecellmembrane,Carbohydrates:Introduction,structure,function,digestionandabsorption,Amino acidsandproteins:Introduction, structure,function, digestion and absorption, Lipids: Introduction, structure,function,digestionandabsorption,Vitaminsandminerals,Fluid,electrolyteandacidbase balance, Cell signaling andhormoneaction,Bodysecretions:Compositionandfunctionofsaliva,gastric acid(HCL),pancreaticjuice,bile, hormones and GI functions

Practica:

- 1. Blood sample collection forbiochemical analysis
- 2. Preparation and calculation of Solutions
- 3. Principles of MEDICAL BIOCHEMISTRY analyzers (spectrophotometer, flame photometer)
- 4. Determination of Cholesterol, Tg, HDL, LDL, sugar, calcium and phosphorus in blood

Recommended

Books

MEDICAL BIOCHEMISTRY, 6E

 Marks' Essentials of Medical MEDICAL BIOCHEMISTRY A Clinical Approach, Second Edition

PMS-602 HUMANPHYSIOLOGY-I CreditHours:4(3+1)

Course Objectives:

After successful completion of this course, students will be able to,

- Describe the basic concepts of physiology beginning from the cell organization to organ system function.
- Discuss the organization of cell, tissue, organ and system with respect to their functions.
- Explain the physiology of Respiration, G.I.T, Urinary system and Endocrine system

Course contents:

Functionalorganization of human body, Mechanism of Homeostasis, Cellstructure and its function, function of different Tissue, Functions of the skin, Types and function of muscle, Neuromuscular junction, functions of the endocrine glands, Breathing Mechanism, Exchange of respiratory Gaseous, Transport of respiratory gases, Function of different part of Digestive system, Function of liverand pancreas, Digestion and Absorption in Gastroint estinal tract, Patho-Physiology of Gastroint estinal Disorders, Formation of Urine by the Kidney, Glomerular filtration, Renal and associated mechanism for controlling ECF, Regulation of Acid-Base Balance, Male Reproductive System (Male), Prostate gland, Spermatogenesis, Female Reproductive System, Menstrual Cycle and Pregnancy and parturition, Mammary Glands and Lactation and Fertility Control.

Practical:

Introduction to microscope
Bleeding time
Clotting time
WBCs count
RBCs count
Plateletscount
Reticulocytes count

Recommended Books:

Essentials of Medical PhysiologyKSembulingam, PremaSembulingam Sixth Edition 2013
Concise Physiology Dr. Raja Shahzad 1st Edition 2012
Guyton And Hall TextbookOf Medical Physiology John E. Hall, Arthur C. Guyton Professor and Chair 2006
Ross and Wilson Anatomy and Physiology in Health And Illness 11th Edition Anne Waugh, Allison Grant 2010

After successful completion of this course, students will be able to,

- Identify the principle structures of tissues, organs and systems
- Discuss the different concepts and terms of general anatomy including skeleton and Musculo skeletal system.
- Explain the anatomy of Thorax, Abdomen and pelvis

Coursecontents: Musculoskeletalsystem (Axialand Appendicular), Axial Skeleton, Different bones of human body, Axialand Appendicular Skeleton, Classification on the basis of development, region and function, General concepto fossification of bones, part syoung bone, Blood supply of long bones. Joints Structural Regional and functional classification of joints, Characteristics of synovial joints, Classification of synovial joints, Movements of synovial joints. Muscular System Partsof muscle Classification of muscles (skeletal, Cardiac, smooth) Thoracicwall: Muscles of thorax, Surface Anatomy, Trachea, lungs, pleura, mammary glands (breast), Heart and thoracic vessels. Thoracic cavity: Mediastinum, Lungs, bronchi, blood supply and lymphatic Abdominal wall: Skin, nerve and blood supply, Muscles of anterior abdominal wall. Abdominal cavity: General Arrangement of the Abdominal Viscera, Peritoneum, Omenta, mesenteries, Stomach, blood, nerve, lymphatic supply, Small intestine, blood, nervous and lymphatic supply, Large intestine: blood nerve and lymphatic supply. The pelvic wall: Anterior, posterior wall, diaphrag m. Pelvic cavity: Ureters, urinary bladder Male genital organs, Female genital organs, Muscles of pelvic region, blood supply, nerve supply.

Practical:

Study Axial, Appendicular skeleton and musculoskeletal system on human skeletal models.
Study and understanding anatomy of Thorax, Abdomen and Pelvis through:
Human Models
Video demonstrations.

Recommended Books:

Ross and Wilson Anatomy and Physiology inhelth and illness 11th Edition Waugh Grant.
Clinical Anatomy (By regions) 9th edition, Richard S. Snell
BDchauraisia for general anatomy

ReferenceBooks

- Netter Atlasof human anatomy 5th Edition Saunders.
- Gray's Anatomy for students 2nd Edition Drake VogalMitcell.

After successful completion of this course, students will be able to,

- Compose a well-constructed essay that develops a clearly defined claim of interpretation which is supported by close textual reading.
- Utilize literary terminology, critical methods, and various lenses of interpretation in their writing.
- Apply the rules of English grammar.
- Adhere to the formatting and documenting conventions of our discipline

Course Contents:

VocabularyBuildingSkills: Antonyms,Synonyms,Homonyms,OnewordSubstitute,Prefixesandsuffixes, Idiomsandphrasalverbs,Logicalconnectors,Checkspellings,PracticalGrammar&WritingSkill:Partsof Speech,Tenses,Paragraphwriting:Practiceinwritingagood,unifiedandcoherentparagraph,Préciswriting andcomprehension,Translationskills:UrdutoEnglish,Readingskills:Skimmingandscanning,intensive andextensive,andspeedreading,summaryandcomprehensionParagraphs,Presentationskills:Developing,OralPresentation skill,Personalitydevelopment(emphasis oncontent,styleandpronunciation)

Recommended books:

- Practical English Grammar by A.J.Thomson and A.V. Martinet. Exercises 2. Third edition. Oxford University Press 1986. ISBN 0 19 431350 6.
- Reading. Advanced. Brian Tomlinsonand Rod Ellis. Oxford Supplementary Skills. Third Impression 1991. ISBN 0 19 453403 0.

After successful completion of this course, students will be able to,

- Develop vision of Historical Perspective, Government, Politics, Contemporary Pakistan, ideological background of Pakistan.
- Study the process of governance, national development, issues arising in the modern age and posing challenges to Pakistan.
- Inculcate patriotism in the hearts of students so that they may become a good citizen.

Course Contents:

HistoricalPerspective:IdeologicalrationalewithspecialreferencetoSirSyedAhmedKhan,AllamaMuhammadIqbal andQuaid-i-AzamMuhammadAliJinnah,FactorsleadingtoMuslimseparatism,People andLand,IndusCivilization,Muslimadvent,LocationandGeo-Physicalfeatures.Governmentand PoliticsinPakistan,Politicalandconstitutionalphases:1947-58,1958-71,1971-77,1977-88,1988-99,1999 onwardContemporaryPakistan:Economicinstitutionsandissues,Societyandsocialstructure,Ethnicity, Foreign policyofPakistanandchallenges,FuturisticoutlookofPakistan

Books Recommended:

- Akbar, S. Zaidi. *IssueinPakistan's Economy*. Karachi: Oxford University Press, 2000.
- Mehmood, Safdar. *Pakistan Kayyun Toota*, Lahore: Idara-e-Saqafat-e-Islamia, Club Road, nd.
- Amin, Tahir. Ethno-National Movement in Pakistan, Islamabad: Institute of Policy Studies, Islamabad.
- Afzal, M. Rafique. *PoliticalPartiesinPakistan*, Vol. I, II&III. Islamabad: National Institute of Historical and cultural Research, 1998.

After successful completion of this course, students will be able to,

- Use technology ethically, safely, securely, and legally.
- Identify and analyze computer hardware, software, and network components.
- Design basic business web pages using current HTML/CSS coding standards.
- Install, configure, and remove software and hardware

Course Contents:

IntroductiontoComputerandWindowXP/7;MSOffice2007(Word,Excel,PowerPoint);Internetaccessanddifferentdatabases availableontheinternet; Email.

PRACTICAL

- Typing a text and aligning the text with different format using MS –Word
- Inserting a table with proper alignment and using MS-Word
- Create mail merge document using MS-Word to prepare greetings for 10 friends
- Preparinga Slide showwith transition, animation and sound effect using MS-Power point
- Creating a worksheet using MS-Excel with data and use of functions
- Using MS-Excel prepare a worksheet with text, date time and data
- Preparing a chart and pie diagrams using MS-Excel
- Internet for searching, uploading files, downloading files and creating e-mail ID
- C language writing programs using functions.

Recommended Books:

Computer science by Muhammad Ashraf, edition 1st 2010

2ndSEMERTER COURSES

- 1. MEDICAL BIOCHEMISTRY-II
- 2. HUMANPHYSIOLOGY-II
- 3. HUMAN ANATOMY-II
- 4. ENGLISH-II
- 5. ISLAMIC STUDIES

After successful completion of this course, students will be able to,

- Describe the synthesis of proteins, lipids, nucleic acids, carbohydrates and their role in metabolic pathways along with their regulation
- Discuss the clinical role of enzymes in human being.
- Interpret and apply nutritional concepts to evaluate and improve the nutritional health of individuals with medical conditions.

Coursecontent:

Carbohydratesmetabolism(Glycolysis,Glycogenolysis,Gluconeogenesis,Glycogenesis,Pentosephosphate pathway,Fermentationandethanolmetabolism,Krebscycle,ETC,Coricycle,Glucosealaninecycle),
Proteinandaminoacidsmetabolism(synthesisanddegradationofaminoacids,Lipidmetabolism(Beta oxidation,Cholesterolmetabolism),Nucleotidemetabolism(Purineandpyrimidinedegradation,uricacid formation),Nutrition(Majorfoodgroups,Balanced diet , Metabolic changes in starvation, Proteinenergymalnutrition,Obesity,kwashiorkor,Marasmus),Clinicaldiagnosticenzymology:clinical significanceofALT,AST,ALP,GGT,LDHandisoenzymes,CKandisoenzymes,Pancreatic lipase and amylase,cholinesterase,G6PD,ACP, cardiac troponins,ANP, BNP andpro-BNP)

Practical:

	Determination	of liver,	cardiac,par	ncreaticenzymes
--	---------------	-----------	-------------	-----------------

- Determination of urea and uricacid
- Demonstration of ELISA, CMIAandCLIAinstrument

RecommendedBooks:

MEDICAL BIOCHEMISTRY by Dr. U. Satyanarayana, U Chakrapani

 $Marks `Essentials of Medical MEDICAL\ BIOCHEMISTRY A Clinical Approach, Second Edition Harper `s\ Illustrated BIOCHEMISTRY a\ LANGE medical\ booktwenty-six the dition$

LehningerPrinciples of BIOCHEMISTRY, 6E

Mc Graw Hill's Manual of laboratory and diagnostic tests by DENISE D. WILSON, PHD, APN, FNP, ANP

After successful completion of this course, students will be able to,

- Demonstrate a systematic and coherent knowledge of the physiological functioning of the central nervous system, special senses (CNS & SS), cardiovascular system and respiratory system.
- Describe the formation of the formed element components of blood.
- Identify the components and function of the lymphatic system and discuss the role of the innate immune response against pathogens

Course Contents:

Physiology of Nervous System, Function of various cranial nerves, Functions of somatic motor nervous system Functions of the autonomic nervoussystem, function of neurons, neuroglial cells and their components. Resting membrane potential and an action potential, function of a synapse and reflex arc, functions of the specialized sense organs: Eye, physiology of site, accommodation, opticnerve and optic chiasma, Ear, functions of the internal, middle and external ear Physiology of the hearing and balance, Smell, physiology of olfactory nerve. Taste, physiology of taste Location of the taste buds Physiology of speech, Blood: Composition and function of Blood, haematopoisis, Blood grouping, Coagulation mechanism, Physiology of Cardiovascular system The Physiology of Pulmonary SystemicCirculation: Arteries Veins Local Control of Blood Vessels Nervous Control of Blood Vessels Regulation of Arterial Pressure, The function of Lymphatic System, tonsils, lymph nodes, the spleen and the thymus, Classification and physiology of Immune system, Antigens and Antibodies, Primary and secondary responses to an antigen Antibody-mediated immunity and cell-mediated immunity Role of lymphocyte inimmunity regulation.

Practical

Spirometer
Electrocardiography
Blood Pressure Measurement
Normal and abnormal ECG interpretation
Pulse rate measurement
Heart sounds

Recommended Books

Ross and Wilson Anatomy and Physiology in Health And Illness 11th Edition Anne Waugh, Allison

After successful completion of this course, students will be able to,

- Identify bones of the upper limb and bony landmarks that articulate at each joint with all muscular compartments of the upper limb.
- Discuss bones of the lower limb and bony landmarks that articulate at each joint with all muscular compartments of the lower limb and identify these structures on radiographic images.
- Describe the topographical and functional anatomy of the head and neck, in particular the arrangement, relations and structure of the major skeletal, muscular and neurovascular components of the head and neckCourse contents:

The upper limb Bonesof shouldergirdle and Arm, Muscles, Axilla, Brachial plexus, Cubital fossa, the forearm, hand bones, muscles, Blood supply, Nerve supply, lymphatics, **The lower limb** Fascia, Bones, Muscles, Femoral triangle, Blood supply, Nerve supply, Lymphatic supply. **Head and neck** Skull, Mandible, Cranial nerves, cranial cavity, Meninges, Brain, Orbit, Neck, Endocrine System Classification of endocrine glands, Pituitary glands, Thyroid Glands, Adrenal gland and differences between the cortex and medulla.

Practical:

Study and u	inderstand the	e anatomy	ofUpper	limb.	Lower lin	nb. Head	and Neck	through

- Human Models Video demonstration
- Study radiographs of upper and lower limb.

Recommended Books:

Ross and Wilson	Anatomy and	Physiology in	health and illness	11th Edition	Waugh Grant.

Clinical Anatomy (By regions) 9th edition, Richard S. Snell.

ReferenceBook

Netter atlas of human anatomy

After successful completion of this course, students will be able to,

- Develop writing, reading and listening skills.
- Demonstrate integrative and independent thinking, originality, imagination, experimentation,
 problem solving, or risk taking in thought, expression, or intellectual engagement.
- Participate in discussions by listening to others' perspectives, asking productive questions, and articulating original ideas.

Course contents:

Writing Skill: CV and job application, Technical Report writing, Writing styles, Changing narration: Converting a dialogue into a report, Convertinga story into a news report, Convertinga graph or picture into a short report or story, Active and Passive voice, Letter / memo writing and minutes of the meeting, use of library and internet recourses, Essay writing, Phrases - Types and functions, Clauses- Types and functions, Punctuation: Tenses - Types, Structure, Function, Conversion into negative and interrogative. Speaking Skill: Group Discussion (Various topics given by the teacher), Presentation by the students (individually), Role Play Activities for improving Speaking. Listening Skill: Listening Various Documentaries, Movies, and online listening activities to improve the listening as well as pronunciation of the words.

Recommended Books:

- Reading. Upper Intermediate. BrainTomlinsonand Rod Ellis. Oxford SupplementarySkills. Third Impression 1992. ISBN 0 19 453402 2

After successful completion of this course, students will be able to,

Recognize basic concept of Islam (faith, pillars and systems etc.) and express their impact on society.

Present Islam as complete code of life and demonstrate understanding of Islamic Ethics.

Demonstrate the role of a medical professional in Islam.

. Course contents:

Fundamental beliefs of Islam, Belief of Tawheed, Belief in Prophet hood, Belief in the Day of Judgment, Worships, Salaat / Prayer, Zakat / Obligatory Charity, Saum/ Fasting, Hajj/ Pilgrimage, Jihad, Importance of Paramedics In Islam, Ethics, Religion and Ethics, Higher Intents / Objectives of Islamic Sharia and Human Health, Importance and Virtues of Medical Profession, Contribution and Achievements of Muslim Doctors, Knowledge of the Rights, Wisdom and Prudence, Sympathy / Empathy, Responsible Life, Patience, Humbleness, Self Respect, Forgiveness, Kindhearted, Beneficence, Self Confidence, Observing Promise, Equality, Relation among the Doctors, Jealousy, Backbiting, Envy, Etiquettes of Gathering, Relation between a Doctor and a Patient, Gentle Speaking, Mercy and Affection, Consoling the Patient, To inquire the health of Patient, Character building of the Patient, Responsibilities of a Doctor,

Recommended Books:

3rdSEMERTERCOURSES: 1. Pharmacology-I 2. General Pathology-I 3. Medical Microbiology-I

- 4. Intensive care Monitoring-I
- 5. Hematology-I
- 6. Communication Skills
- 7. Respiratory Therapy-I

After successful completion of this course, students will be able to,

- Describe common terms related to pharmacology and drug therapy.
- Identify a range of drugs used in medicine and discuss their mechanisms of action.
- Report the clinical applications, side effects and toxicities of drugs used in medicine.

Course Contents:

IntroductiontoPharmacology,Pharmacokinetics,Pharmacodynamics,Adverseeffectsofdrugs,Classification ofdrugs, Drugs affecting the Autonomic Nervous System, NSAID, Opioids, Drugs Affecting Endocrine system(Corticosteroids, Thyroidand AntiThyroid), Gastrointestinal Drugs(PPI, H2blockers and Antacids), Histamines, Anesthetics(General and local anesthetics),

Anti-

Practical:

- 1. Introduction to drug dosage form
- 2. Study of the action of drugs (Atropine) on the rabbit's eye

RECOMMENDED BOOKS:

- 1. Lippincott's pharmacology (text book) byMycek 2nd edition published by Lippincott Raven
- 2. Katzung textbook of pharmacology (Reference Book) by BertramKatzung 8th Edition, Published by Appleton

Aims and Objectives

After successful completion of this course, students will be able to,

- Specifythe abnormalities of cell growth and differentiation.
- Describe cellular responses to stress and noxious stimuli and inflammation.
- Discuss cell injury, cell death and mechanisms involved in wound healing.
- Explain the hemodynamic disorders and neoplasia.

Course Contents

Cell Injury & adaptation Cell injury, Cellular adaptation, Inflammation Acute Inflammation, Chronic Inflammation, Cell Repair & WoundHealing Regeneration & Repair, Healing Factors affecting Healing Hemodynamic Disorders Define & classify the terms, Edema, Hemorrhage, Thrombosis, Embolism, Infarction & Hyperemia, Shock, compensatorymechanism of shock, possibleconsequences of thrombosis& difference between arterial& venous emboli, NeoplasiaDysplasia&NeoplasiaDifference between benign & malignant neoplasm, etiological factors for Neoplasia, different modes ofmetastasis

Practical

MLT-601 Hematology-I Credithours3(2+1)

Course Objectives:

Bythe end of this semester the students of BS technology 3rd semester willbeableto

- Discussbasicconceptsin Hematology and acquire skill in practical work to produce students steepedinknowledge of Hematology
- Interpret thetestsresultof thebasichematological proceduresforaccuratediagnosisandpatient's monitoring

Course content:

Introduction to he matology, physiology of blood and composition, Introduction to bone marrow, structure and function of bone marrow, Blood formation in the body (Intra-uterine and extra-uterine), factors governinghematopoiesis, Erythropoiesis, differentstages and factor effecting one rythropoiesis, Granulopoiesis, different stages and factor effecting on granulopoiesis, Introduction to hemoglobin, structure, synthesis and function of hemoglobin, complete blood count (CBC) and its importance, Morphologyofredbloodcellsandwhitebloodcellsandits importanceinvarioushematological disorders, Introduction to a nemia its classification, Introduction to he molysis (physiological and the control of the contpathological), Introduction to WBC disorders, introduction to leukemia, etiology, pathogenesis and its classification, Leukocytosis, leukopenia, Neutrophilia, condition related to neutrophilia, Eosinophilia, conditionrelated toeosinophilia, Monocytosis, conditionrelated Lymphocytosis, to monocytosis, conditionrelatedtolymphocytosis, Introductiontohemostasis, mechanismofhemostasis, function of platelets and coagulation factors, Coagulation cascade, quantitative disorder of platelets, qualitative disorderof platelets.

Practical:

- 1. Collection of bloods ample
- 2. Preparation and stainingofperipheralbloodsmear
- 3. Total leucocyte count, rbc count
- 4. Determination of absolute values
- 5. Differentialleucocyte count; plateletscount andreticulocytescount
- 6. TodeterminetheESR
- 7. Todeterminebleedingtime, prothrombintime; activated partial thromboplastintime

PMS-613

MEDICALMICROBIOLOGY-I(Non-MLT)

CreditHours:3(2+1)

Course objectives:

- To introduce the students with basic concepts in bacteriologyand mycology.
- To introduce the students with common bacterial and fungal infections.
- To introduce the students with diagnosis of common bacterial and fungal infections.

Course contents:

Historical review and scope of microbiology, sterilization, structure and function of prokaryotic cell, difference between prokaryotic and eukaryotic cell, bacterial growth, normal microbial flora ofhuman body, mechanism of bacterial pathogenesis, host parasite interaction, Immune response to infection, common bacterial pathogen prevailing in Pakistan, introduction to fungi, fungal characteristic, morphology, structure, replication and classification, mechanism of fungal pathogenesis, common fungal pathogen prevailing in Pakistan.

Practical:

П	Inter-decision and decomposition of Laboratory Engineering and in Microbial and
	Introduction and demonstration of Laboratory Equipments used in Microbiology.
	Inoculation and isolation of purebacterial culture and its antibiotic susceptibility testing.
	Demonstration of different types of physical and chemical methods of sterilization, and disinfection.
	Students should be thorough to work with compound microscope.
	Detection of motility: Hanging drop examinations with motile bacteria, non-motile bacteria.
	Simple staining methods of pure culture and mixed culture.
	Gram's staining of pure culture and mixed culture.
	AFB staining of Normal smear, AFB positive smear.
	KOH preparation for fungal hyphae.
	Germ tube test for yeast identification.

Recommended books:

Gram stain for candida.

Objectives

After successful completion of this course, students will be able to,

- Communicate effectively both verbally and non-verbally
- Apply the requisite academic communication skills in their essay writing and other forms of academic writing
- Use various computer-mediated communication platforms in their academic and professional work
- Relate the interpersonal and organizational dynamics that affect effective communication in organizations

Introduction to Communication, Meaning and definition of Communication, Theprocess of communication, Models of communication, Effective Communications in Business, Importance and Benefits of effective communication, Components of Communication, Communication barriers, Nonverbal communication, Principles of effective communication, Seven Cs, Communication foracademic purposes, Introduction to academic writing, Summarizing, paraphrasing and argumentation skills, Textual cohesion, Communication in Organizations, Formal communication networks in organizations, Informal communication networks, Computer- mediated communication (videoconferencing, internet,e-mail, Skype, groupware, etc.), Organizational communication, Memos, Letters, Reports, Proposals, Circulars, etc., Public Speaking and Presentationskills, Effective public presentation skills, Audienceanalysis, Effective argumentation skills, Interview skills

Recommended books:

Respiratorytherapy-I

CreditHours2(1+1)

Course Objectives:

- To describe professional knowledge, skill, techniques & ethical values to enable the students to apply their acquired expertise.
- Plan the total patient care in medical, surgical, & neurological emergency, including the awareness of support services available and knowing when to activate them.

Course contents:

Oxygentherapyandbasicrespiratorycare: Chemistryofoxygen, Oxygentherapydevices, Mixingairand oxygen, pulmonaryoxygentoxicity, the clinical manifestation of pulmonaryoxygentherapy, Absorption at electasis.

Hyperbaricoxygentherapy:Introductiontohyperbarictherapyanddescriptionofequipment,Effectof hyperoxia,Uses of hyperbaric oxygenfor specific disease, hyperbaric treatment complications.

Humidityandblandaerosolstherapy:Humiditytherapy,Blandaerosolstherapy,criteriaforselectingthe appropriate therapy

Aerosolsdrugtherapy:Characteristicsoftherapeuticaerosols,Hazardsofaerosolstherapy,Aerosolsdrug deliverysystem,Selectingandaerosolsdrugdeliverysystem,Assessmentbasedbronchodilatortherapy protocols, Special considerations.

Foundationaspectsofmechanicalventilation: Introductiontomechanicalventilation, physiology of mechanicalventilation, Breathing exercise and coughing techniques, Chest physiotherapy and postural drainage.

Practical:

- 2. General Pathology-II
- 3. Medical Microbiology-II
- 4. Clinicalmedicine
- 5. Behavioral Sciences
- 6. Diagnostic & Imaging

PMS-6	PHARMACOLOGY-II CreditHours:3(2+1)
COUR	SEOBJECTIVES:
	To provide quality patient care in routine as well as advanced procedures.
	To understand the mechanism of drug action at molecular as well as cellular level, both desirable and adverse.
	To understand the principles of pharmacokinetics i.e. drug absorption, distribution, metabolism and excretion and be able to apply these principles in therapeuticpractice.
Course	e contents:
AntiHy	ctingoncardiovascularsystem;Drugsforheartfailure,anti-hypertensivedrugs,antianginaldrugs, perlipidemicdrugs,Blood drugs(Anticoagulants), Diuretics, Chemotherapeutics drugs([Anti-Dl,Anti-Malarial],Anti-Fungal,Anthelmintic),Antibiotics(Penicillin's,cephalosporin's,macrolides, glycosides, fluroquinolones), Drugs acting on Respiratory system(Asthma).
Practio	cal:
	Routes of drug administration
	Dose-Response Curves
	Affect of adrenaline on pulse rate
	Affect of beta blockers on heartrateafter exercise
	Source of drug and identification of some raw materials that are source of drug
	Weight conversions and measurements
	Preparation Sulfur ointment
	Preparation of pilocarpine drops
П	Prescription writing

Short Text Book of Pathology Moh. Inam Danish 3rd Edition 2006

PMS-618 MEDICALMICROBIOLOGY-II(Non-MLT) CreditHours:3(2+1)

Course objectives:

- To introduce the students with basic concepts in virology and parasitology.
- To introduce the students with common viral and parasitic infections.
- To introduce the students with diagnosis of common viral andparasitic infections.

Course contents:

Introduction to virology, Viralmorphology, structure, replication and classification, general properties of virus, pathogenesis and control of virus, common viral pathogen prevailing in Pakistan, introduction to parasitology, Parasite (protozoan and helminthes) morphology and classification, general principal of pathogenesis, immunology and diagnosis of parasitic infection, common parasitic pathogen prevailing in Pakistan.

Practical:

Cleaning of new and used glass wares for microbiological purposes.
Students should be familiar to use autoclave, hot air oven, water bath, steamer etc.
Macroscopic and microscopic examination of stool for adult worms, ova, cysts, larvae.
Visit to hospital for demonstration of biomedical waste management.
Demonstration of common serological tests used for the diagnosis of viral and parasitic infection.
Demonstration of malarial parasites in blood and bone marrow.
Demonstration of leishmania in blood film.
Concentration techniques for intestinal parasites in stool.

DIAGNOSTICIMAGING

CreditHours2(1+1)

Course objectives:

- To equip the student with professional knowledge, skill, techniques & ethical values to enable them to apply their acquired expertise in diagnostic imaging.
- To understand the total patient care imaging diagnostic study,including the awareness of support services available and knowing when to activate them.

To deliverthe efficient and competent care to acute and chronically ill patient in imaging and

diagnostic study.

Course contents: Normal chest X-ray anatomy, Basic physics of X-ray and assessment of film quality, Interpretation CXR, Cardiac configuration, Identify cardiomegaly, Identify atelectasis and lung collapse, Lung field and airway, Optimum position of ETT, NGT, CENTRAL LINES, Percutaneous gastrostomy Tube, PCN Tube, DJ stent, Radio-opaque line importance, Abnormal X-ray, Identification of (Trauma, Hemothorax, Pneumothorax, Lungcontusion) on X-Ray film, Bed side Ultrasound in ICU, Echocardiography/TEE, Pulmonary Edema, Cardiac Deviation, ARDS, Pneumonia(Bronchial pneumonia, Lobarpneumonia, Aspiration pneumonia). Protection of health care workers in diagnostic imaging department, Responsibilities of Technologist in diagnostic imaging department, Patient careprotocols in diagnostic imaging department.

Practical:

- Identification of the Structures of different organs
- Radiological Presentation & Pathological Findings on Radiographs
- I Films demonstrating Anatomy

- 1. DiagnosticImaging by Peter Armstrong MartinWastie AndreaGRockall 6thEdition.
- 2. Clinical Radiology Made ridiculously simple.

5thSEMESTERCOURSES:

- 1. Advances in respiratory therapyand intensive care
- 2. Trauma Intensive Care
- 3. AnesthesiaEquipment
- 4. Burns& Toxicology
- 5. Applied Physics
- 6. Critical care Laboratory diagnostics

COURSE CONTENT:

Monitoring muscle strength, work of breathing, Maximum inspiratory and expiratory pressures, Bedside PFT, Ventilator bundles, ICU bundles, ICUMortalityrate, ICU scoring system, Early Warning system, SOFA scoring system, the APACHE-II,

CNS: Monitoring brain stem function, GCS, Pain scoring, Sedation and analgesiascoring, Coma. Nutritional monitoring

Care& maintenance if ICU equipment & Troubleshooting (Includesquality checks and calibrations of all the equipment) Pumps: Infusion, syringe, Monitors: Stand-alone & multi-parameter, Cardiac Output monitors, ECG machine, ABG machine, Defibrillator, Ultrasound machine, Bronchoscope, Intubation trolley components and daily monitoring, wall out lets monitoring,

PRACTICALS

	Logbookandprojectcompletionforinternalassessment
	HowtocheckICUequipment.
	Cleaning, sterilization and maintenance of all ICU equipment of the control of
	Adjustment of ventilator parameters.
П	MonitorfluidresponsivenessinlCUpatient

Course Objectives:

To develop	the l	knowledge	and ski	illsregardi	ng neonat	al and	pediatric	cintensive	care.
					0				

To provide basic knowledge about the management of neonatal and pediatric abnormalities in intensive care unit

Course contents:

Neonates, Infants and Children

Introduction, Anatomical considerations, Normal delivery procedure-Prenatal care-Intranatal care Postnatal care-Newborn care-Abnormal deliveries-Prolapsed cord-Breech delivery, Multiple birth Premature delivery, Assessment of the infant and children-developmental considerations for the age groups of infants, pre-school, school age and adolescent—Neonatal Resuscitation.

Common Diseases among Infants & Children

Respiratory distress infant and children-Differentiate betweenrespiratory distress and respiratory failure-Airwayobstruction,-stepsinthemanagementofforeignbodyairwayobstruction-LRI,URI, Bronchiolitis

Structuralapproachtowardsaseriousillorinjuredchild, Childwithbreathingdifficulty, Asthma, Childwith abnormal pulse rate and rhythms, Convulsing child, child in shock, Shock types and its management, Child with bumsandScald, Childwithdecreaseconsciouslevel, ChildwithabdominalTrauma, Acutechesttrauma, Child with acute spinal cord injury, Child with head injury and itsmanagement, Near Drowning.

Practical:

- 1. Blood gas and electrolyte analyzer
- 2. Resuscitation & airway teachinglearning simulators
- 3. Portable Suction machine
- 4. Portable Vital Signs Monitor
- 5. Transport Incubators
- 6. Advance Pediatric life support.

ECT-613	ObstetricalCriticalcare-I	CreditHours3(2+1)

Course Objectives:

To provide knowledge regarding various abnormalities during obstetrical emergencies and its
management.

To demonstrate practical issuesemerge during obstetrical emergencies.

Course contents:

ManagementofObstetricalemergency,Medicalemergencyduringpregnancy,MotherwithBreathing difficulty,Severebronchialasthma,Acutelowerrespiratorytractinfection,HeartFailure,Anemia,Sicklecell disease,Managementofdiabeticketoacidosis,Anaphylaxismanagement,pulmonaryembolism,Severe Dehydration,Motherwithseveregastroenteritis,motherwithacuterenalfailure,motherincomaconvulsion, HIVinpregnancy,EmergencyRelatingtoPregnancy,Motherwithsevereabdomenpain,Ectopicpregnancy, Abortion,Motherwithsevereabdomenpaininlaterpregnancy,Motherwithlargeantepartumhemorrhage, Mother with large post partum hemorrhage.

Practical:

AutomatedExterna	1 D	efibril	llator
1 Iutomateun Atema	$_{1}$	CIIUIII	liatoi

- Conventional Defibrillator and Monitors
- Endotracheal Intubation & Laryngeal Mask Airway
- Lung ventilation and/or administering oxygen
- EndTidal C0₂Measuring Devices
- Monitoring Arterial Pulse Oximetry
- Urinary &Gastric Catheterization
- Episiotomyscissor
- Cardiopulmonary Resuscitation

RECOMENDEDBOOKS:-

PMS-624	FundamentalsofInfectioncontrol	CreditHours3(2+1)
Course Objectives:		
To introduce the	students with basic concepts in infection control.	
To introduce the	students with infection control principles and practice	es.
To introduce the	students with importance of immunization and hand l	hygiene in infection control.
To introduce the	students with the role of clinical laboratoryin infection	n control.
Course contents:		
the hospitalenvironment antisepsis, practical disir uses (prophylactic, empi	control, principle of infection control, source and transition prophylaxes, exposure prophylaxes, suffection, epidemiology of infectious disease, antimicro rical, and therapeutic), antibiotic resistance and policiseases, biomedical waste management, biosafety leve	terilization, disinfection and obial agents, antibiotic and their cy, principles of laboratory
Hand washing an	d hand rubbing technique.	
Preparation of di	fferent disinfection and antiseptic solutions.	
Biomedicalwaste	managements in hospitals.	
Cleaning and dis	infection of working premises.	
How to handle sp	pills and aseptic handling.	
Standard precaut	ions and PPE.	
Recommended Books: Fundamentals of	Infection Prevention and Control: Theory and Practic	ee. Weston, D., Wiley-Blackwell,

- Fundamentals of Infection Prevention and Control: Theory and Practice. Weston, D., Wiley-Blackwell, 2013.
- Sherris Medical Microbiology: An Introduction to Infectious Diseases. Ryan, K. J., Ray, C. G., 4th ed. McGraw-Hill, 2003.
- District Laboratory Practice in Tropical Countries, Part 1 & Part 2. Cheesbrough, M., 2nd ed. Cambridge University Press, 2006.
- Medical Microbiology and Infectionat a Glance. Gillespie, S., H., Bamford, K., B., 4th ed. Wiley-Blackwell, 2012.

PMS-623	EPIDEMIOLOGY	CreditHours:3(2+1)
---------	---------------------	--------------------

Course objectives:

After studying this course the students will beable to:

- Explainepidemiologicalterminologies
- Applytheknowledgetocalculatediseaserisk,prevalenceandincidence
- Selectandchooseanappropriatestudydesigninresearch
- ExplainconfoundingandBiasesinstudies
- AppraiseSWOTanalysis

Course Contents:

IntroductiontoEpidemiologyandbasictermsusedinEpidemiology,MeasuresofDiseaseOccurrence; IncidenceandPrevalence,Incidence,Ratesanditstypes,Dynamicsofdiseasetransmission, Measurementofdiseasefrequency,risk,rateandproportion,Calculationof:Prevalence,Incidence, Duration,MortalityandMorbidity,StudyDesignOptions,ResearchstudyDesigns,CaseControlStudy,CohortStudy,ExperimentalStudy,RCT,Meta-analysisandsystematicreview,TheCross-Sectional Study,Case-Reports,SourcesofError;ConfoundingandBiases,Oddsratioandrelativerisk,SWOT analysis, Reliability of tests by usingSensitivityand specificity

Recommended Books:

- Calculation of Sensitivity and specificity
- CalculationofIncidenceandprevalence
- Findingriskofdisease,rateandfrequency
- SWOTanalysis

- 1.An_Introduction_to_Epidemiology_for_Health_Professionals
- EpidemiologybyLeonGordis5thEdition

PMS-PMS-622 BIOSTATISTICS CreditHours:3(2+1)

Course objectives:

After successful completion of this course, students will be able to,

- State the principal concepts about biostatistics; collect data relating to variable/variables.
- Examine and calculate descriptive statistics from collected data.
- Interpret data via binomial distribution and the concept of sampling.
- Apply hypothesis testing via some of the statistical distributions.

Course Contents:

IntroductiontoBiostatisticsanditstypes;Descriptiveandinferentialstatistics,Measureofcentral tendency,Measureofdispersion,Statisticaldata,PresentationofDatabyGraphs,Dataanditstypes,Datacollectiontools,DataanalysistoolsHealthRelatedData,Presentationofquantitativedata,The conceptofsampling,typesandmethodsofsample,sampledistribution,errorofsampling,Variableand itstypes,Testsusedinbiostatisticstheiruseandinterpretation(t-tests,Chi-squareANOVA,Regression andcorrelation)Hypothesisformulationandtestingonthebasisofstatisticsandstatisticaltests,Sample andpopulation,Basicconsiderationsinsampling,randomsampling,stratifiedrandomsampling,cluster sampling,systematicsampling,determinationofsamplesize,eliminationofsamplingbias,twotypesof errors,acceptanceandrejectionRegions,Towsidedandonesidedtests,generalstepsinhypothesis testing,testaboutmeans,confidenceintervalformean,Preparingdataanalysisbyvarioussoftware,Use of SPSS

Practical Work:

- Manualcalculationrelated to measure of central tendency and measure of Dispersion
- DefiningvariablesinSPSS
- EntryofdatainSPSS
- AnalysisofdatainSPSS

- Aquide to research methodology, biostatistics and medical writing by college of physicians and surgeons Pakistan by WHO collaboration center
- Reading understandingmultivanant statisticsgiimm LG Yard AD PR, publisher American Psychological association
- Ilyas Ansari's community medicine (Text Book) by Ilyas and Ansari 2003 published by Medical division Urdu Bazzar Karachi

Course Objectives:

After studying this course the students will beable to:

After successful completion of this course, students will be able to,

- Recognize the basic concepts of research and the research process.
- Develop understanding on various kinds of research, objectives of doing research, research designs and sampling.
- Conduct research work and formulating research synopsis and report.

Course Contents:

Introductiontoresearch(insimpletermandascientificterm),conceptofresearch,whydoneed research,advantageandscopeofresearch,identificationofresearchneedsanditsqualities,Typesof research;Qualitative,Quantitativeandtheirsubtypes,ResearchprocessIntroduction(Deciding, formulatingresearchquestions,planning,conductofstudy,datacollection,processingandanalysis, Researchwritingandreporting),Literaturereview(What,why,wherefrom,howandqualitiesofgood literatureanditsuse),Writingaresearchproblem/questionandselectionofthetitleofstudy, Identificationofvariousresearchvariables,Hypothesisitstypes,formulationandtestingofhypothesis, Researchstudydesignsusedinqualitativeandquantitativestudies,Designingofdatacollection tools/questionnaires,Selectionofappropriatesamplingtechniqueinvariousstudydesigns,Conceptof validityandreliability,Researchproposalwriting,EthicalprinciplesofResearchandtheirexamplesto applythoseprinciples,Datacollectionandprocessing/displayingtechniques,Writingofresearchreport (Chaptersinresearch report/thesis, Outline/Abstract ofresearch, Referencing and Bibliography0

Practical Work:

- LiteratureSearch
- Surveyconduct
- CitationandReferencing
- Proposalwriting
- Datacollectionanddisplaying

Course Objectives:

The student will learn some basic research methodology, gain knowledge of the specific area
of radiology being researched and have the opportunity for more extensive one-on-one
interaction with a member of the radiological staff. It will hopefully result in some form of
presentation or publication for the student. This is most suitable for students planning to
enter radiology as a career.

Course contents:

During last year each student should select a topic of researchreport with consultation of his/her supervisor and shall prepare and submit research report to Khyber Medical University by the end of last year.

Practical:

A hard copy of research project should submit to examination for degree requirements fulfillment

PMS-625 BIOETHICS

CreditHours2(2+0) Course Objectives:

After successful completion of this course, students will be able to,

- Identify ethical issues in medicine, health care and life sciences.
- Describe rational justification for ethical decisions.
- Practice the ethical principles of the Universal Declaration on Bioethics and Human Rights.
- Recognize and distinguish an ethical issue from other issues.

Course Contents:

Introductiontobioethics, ethical principles, autonomy, informed consent, intentional non-disclosure, patient self-determination act, the health insurance portability and account a bility act of 1996 (HIPAA) privacy and security rules, non-male ficence, slippery slope arguments, beneficence, paternalism, justice, social justice, the patient protection and affordable careact, professional patient relationship, unavoidable trust, human dignity, advocacy, moral suffering, ethical dilemmas.

Recommended Books:
